

Dungeon Danger Contract

Yannick Garbe 2CSD GD1

Overview

De Elevator Pitch

In this game your character goes through a dungeon fighting enemies and solving room for room challenges. By solving puzzles and fighting enemies the player can progress through all the rooms and take on the final boss fight.

Thema / Setting / Genre / Inspiration

Dungeon Danger is a 3D action-adventure game for 1 player.

The setting is fantasy / medieval. This game will use low-poly models with low resolution textures.

This game is mainly inspired by games like Zelda Ocarina of Time and The Binding of Isaac.

Core Gameplay Mechanics

- Enemy target system
- Interaction system
- Save statue system
- Item pickup system

Software / Plugins

- Unity Engine 6000.2.11f1
- GitHub desktop

Planning

Project Overview

- How long is the production duration?
8 weeks
- In what order will the game be made?
 - Player movement
 - Enemy target system
 - Interaction system
 - Player health script
 - Player user interface
 - Enemy health script
 - Bat enemy
 - Tweak feel and gameplay
 - Playtests
 - Process playtest feedback
 - First presentation
 - Player auto jump
 - Player dodge
 - Player shield
 - Skeleton enemy
 - Archer enemy
 - Design dungeon room layout
 - Puzzle scripts
 - Puzzle design
 - Map environment
 - Boss movement
 - Boss weak points / health logic
 - Boss health bar

- Main menu
- Settings
- Pause menu
- Save / load

- Add sound effects
- Add music
- Add particles

- Playtest 2
- Process playtest feedback
- Polish project

De Game

Gameplay

The gameplay is mainly focused on combat and simple puzzle elements. Explore rooms and fight enemies, collect keys to progress and find hidden rooms. Beat the final boss to finish the dungeon.

Gameplay

In this game the player can interact with some items and objects. If the player runs into a key, heart or coin it automatically collects the item.

The player can interact with objects like doors, buttons and push able blocks by walking up to the object and pressing the action button.

Some doors only open when a requirement is achieved like killing all the enemies in that room or pushing a block into the correct place.

Saving progress is possible by walking up to a save statue and using the action button, if the player has enough coins the save statues is bought and if the player dies, he returns to that point with the same number of resources he had before. Once you reach the final room the final boss fight starts.

The boss is a worm with his weak point at the end of his tail. If damaged the behavior of the boss changes (faster and more unpredictable movement).

Kill the boss by damaging his weak spot 3 times.

Milestone Planning

- **Gameloop**
 - Time Scale
 - Movement, 3 hours
 - Enemy target system, 5 hours
 - Interaction system, 4 hours
 - Health script, 1 hour
 - Player user interface 2 hours
 - Enemy Health Script 1 hour
 - User interface, 2 hours
 - Playtests, 5 hours
 - Process playtest feedback, 5 hours
 - Tweak feel and gameplay, 3 hours
- **Player**
 - Time Scale
 - Movement, 3 hours
 - Auto Jump, 2 hours
 - Dodge, 2 hours
 - Shield, 2 hours
 - Enemy target system, 5 hours
 - Interaction system, 4 hours
 - Health script, 1 hour
- **Enemies**
 - Time Scale
 - Skeleton enemy type, 3 hours
 - Archer enemy type, 2 hours
- **Map design**
 - Time Scale
 - Design dungeon room layout, 2 hours
 - Puzzle scripts, 4 hours
 - Puzzle design, 2 hours

- **Boss fight**
 - Time Scale
 - Movement, 3 hours
 - Weakpoints / health logic, 2 hours
 - Health bar user interface, 2 hours

- **Interface menu**
 - Time Scale
 - Main menu 1 hour
 - Settings 2 hours
 - Pause screen 1 hour
 - Save/load, 3 hours

- **Final phase**
 - Time Scale
 - Sound effects, 3 hours
 - Add music, 1 hour
 - Add particles, 1 hour
 - Playtests 2, 5 hours
 - Process playtest feedback, 5 hours
 - Polish project, 5 hours
